## SCLogic Package Tracking Software Powers Latin American Courier and Ballot Box Tracking Applications

ANNAPOLIS, MD February 2, 2012 — SCLogic today announced the completion of a courier package tracking software application for IDS de Centroamérica. IDS will use this application to market to its Latin American clients.

This courier solution follows a successful implementation of SCLogic tracking software that helped IDS and their client, Cargo Expreso, successfully track hundreds of ballot boxes in the recent Guatemalan national elections. See the link to the [ballot box tracking success story](#) for further details of that deployment.

Fernando Martin del Campo, Executive Director of IDS de Centroamérica, explained, "the superior performance of the SCLogic team and their software for the Guatemala election ballot box tracking application made the development of a courier application for IDS a natural next step in our strategic plans."

Mailing industry expert and Vice President of Emerging Markets at SCLogic, Bruce Little, commented, "SCLogic is delighted to provide the courier and ballot box tracking applications for IDS de Centroamérica to expand their presence in Latin America. These are just a couple examples of the [many applications](#) of SCLogic barcode mail and package tracking software solutions."

### About IDS

For over 30 years, a focus on customer needs and a depth and breadth of technology expertise has helped IT solution integrator IDS de Centroamérica establish a strong presence across Central and Latin America. "With technologies that increase profitability and improve customer service, IDS delivers on its main business proposition: to help our clients further their strategic business goals and enhance their competitive position," said Fernando Martin del Campo, Executive Director of IDS.
